ART UNIT PAPER NUMBER

3671

DATE MAILED: 09/08/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/800,443

Applicant(s)

CHITWOOD ET AL.

Examiner

Thomas A. Beach

Art Unit

3671

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on amendment filed 06/19/06.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-6 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-6 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. Claims 3 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable by Coats 6,615,848 alone. As concerns claim 3, Coats shows a flowline for producing hydrocarbons from a subsea well that is comprised of a substantially neutrally buoyant tubular composite umbilical means (figures 1-2), whereby the tubular composite umbilical means that contains produced hydrocarbons is substantially neutrally buoyant in the sea water adjacent to the subsea well (abstract) and anchored in one location 48. The buoyant flowline of Coats is capable of being anchored on either ends of a canyon. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Coates to anchor the flowline over canyons to overcome varying subsea conditions, thus improving the versatility of the flowline.

As concerns claim 6, Coats shows a flowline for producing hydrocarbons from a subsea well that is comprised of a positively buoyant tubular composite umbilical means, whereby the tubular composite umbilical means (figures 1-2) that contains any produced hydrocarbons is positively buoyant in the sea water adjacent to the subsea well (abstract) and anchored in one location 48. The buoyant flowline of Coats is capable of being anchored on either ends of a canyon. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Coates to anchor the flowline over canyons to overcome varying subsea conditions, thus improving the versatility of the flowline.

2. Claims 1, 2, 4, and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Costa Filho 5,289,561 in view of Quigley et al 6,663,453. Costa Filho shows a flowline for producing hydrocarbons from a subsea well that is comprised of a tubular 78 composite umbilical means that possesses electrical heating means 31 within the tubular walls of the tubular composite umbilical means to prevent waxes and hydrates from forming within the flowline and blocking the flowline (fig.1 and 6-7), whereby the electrical heating means is comprised of at least one electrical conductor disposed within the tubular walls of the composite umbilical means that conducts electrical current that is used to heat the tubular composite umbilical means, and whereby the tubular composite umbilical means that contains any produced hydrocarbons and is anchored 17 to the seafloor at at least one location. Costa Filho does not show a substantially neutrally buoyant flow line and is substantially neutrally buoyant in the sea water adjacent to the subsea well; however, Quigley shows a similar flowline (fig 12) for producing hydrocarbons from a subsea well including buoyancy means that allows for neutral or positive buoyancy (col. 1, lines 1-17). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Costo Filho, as taught by Quigley, to include buoyancy to prevent damage to the flowline by its weight (having to be thicker the deeper the flowline) at greater depths while maintaining flow performance. The buoyant flowline of the combination is capable of being anchored on either ends of a canyon. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the combination above to

anchor the flowline over canyons to overcome varying subsea conditions, thus improving the versatility of the flowline.

Response to Arguments

3. Applicant's arguments filed 06/19/06 have been fully considered but they are not persuasive and are moot in view of the new grounds of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas A. Beach whose telephone number is 571.272.6988. The examiner can normally be reached on Monday-Friday, 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Will can be reached on 571.272.6998. The fax phone number for the organization where this application or proceeding is assigned is 571.273.8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
